

Basting, Edge to Edge, and Custom Quilting Services

Basting--Yes, we can baste your quilts for you!

All basting is assigned a flat charge of \$20.00 per quilt.

There are innumerable ways to quilt a quilt. Our goal is to find the best way that satisfies you while also meeting a fair price point. We are committed to working with you to achieve that goal!

Edge to Edge Quilting

These would be either pantographs or edge to edge template work such as Baptist Fans or Shells as an example.

Edge to Edge Quilting--one repetitive design for the entire body of the quilt--\$0.03 per square inch for a low to medium density design and \$0.05 per square inch for a high density design,
--

Can you add a different border treatment to an edge to edge design? Absolutely! The additional cost will be determined at intake.

We can accommodate an edge to edge design that 94" wide.

Custom Quilting

By its very nature, custom quilting is specifically tailored to the quilt and will involve ruler work, templates, stencils, and or free motion quilting. All of these are hand guided, no robotics.

There are 3 types of custom quilting:

Low Density--Stitch in the ditch, straight-line outline work, templates--\$16.00 an hour	16.00 an hour
--	---------------

Medium Density--Stitch in the ditch, outline work, templates, stencils, free motion quilting and feather work--\$16.00 an hour	16.00 an hour
High Density--Stitch in the ditch, outline work, template, stencils, free motion quilting, feather work, fills, trapunto, art quilting, and couching work.	20.00 an hour

The difference between low and medium density quilting is the time involved. Low density will provide a custom look with less time involved. Medium density quilting will provide a more detailed custom look with more time involved.

High density quilting requires both an increase in time and an increase in skill set and can be limited to specific areas of a quilt--for example, an applique medallion surrounded by simple patchwork will only require fills around the applique and not the patchwork, The medallion treatment may require 4 hours high density quilting whereas the patchwork may only need 10 hours low to medium density quilting.
